

Abstract of the Disclosure

A toy vehicle package includes a generally cylindrical body having a removable base on the lower end thereof and a removable cap on the upper end thereof. The base includes a vehicle platform which receives and supports a toy vehicle. The package body defines a transparent window through which the toy vehicle may be viewed. A plurality of removable breakaway tabs extend downwardly from the toy vehicle package body through slots defined in the base to provide attachment of the base. Once the tabs have been removed, the base is then rotateably positionable within the toy vehicle package body.
